

FPV Card Boss - Quick Reference

Festival FPV stabilizer - the whole job on one card.

THE LOOP

Pick assignment - **Create Folders** - **Copy SD to RAW** - set Horizon/Dual - **Auto-Run GoPro** (hands off) - **Move Files** - **Copy Media** + **Copy Bella** - **Dump Raws** - **Complete Card** - update Media Master - wipe card.

Export settings (every clip)

- > Codec **HEVC 10-bit** - HyperSmooth Pro **ON**
- > Smoothness **15** - Cropping **15** - Aspect **8:7**
- > Un-gain unlinks the sliders before setting them.

Calibration order (14 - hover, press SPACE)

batch list - 10-bit - HyperSmooth - un-gain - Horizon Lock - Smoothness start/end - Cropping start/end - aspect open - 8:7 - drop zone - Start - Remove

Folder map

- > **Local:** Event\Pilot\Day\Artist\RAW + STABILIZED
- > **Media:** [CardID]\ (RAW + STABILIZED) - **Bella:** [Artist]\ (STABILIZED only)
- > **Dual:** 2nd pass to STABILIZED\HORIZON LOCK\

Modes & connect

- > **Horizon Lock** = one level export - **Dual** = regular + Horizon (2x time)
- > **Auto** = move to Media to Bella to complete (raws stay manual)
- > **Tailscale HTTPS** = offline + mic; HTTP/LAN = online only

Shot list & Media Master

The phone auto-syncs the computer's shot list (no import; completed shots stay completed). Media Master (FILM CREW tab): B = Card ID, C = Size GB, I = Artist, J = COMPLETED - update only after the full folder is on the Media Drive.

MAC ONE-TIME

Grant Accessibility + Screen Recording (System Settings > Privacy & Security). Calibration is separate from Windows.

GOLDEN RULES

Never deliver a card whose file count doesn't match. Re-calibrate whenever the GoPro window moves. Always dump raws before wiping a card.
